EDUCATION

IIIT Guwahati — B.Tech in Computer Science and Engineering	Aug 2023 – May 2027
CGPA: 7.63 / 10.0	Guwahati, Assam
Kendriya Vidyalaya 1STC Jabalpur — Schooling (1st–12th)	Aug 2011 – May 2023
	Jabalpur, MP

PROJECTS

Intelligent AI Coding Platform (<i>Next.js, FastAPI, PostgreSQL, Qdrant, Docker</i>)	Github
- Built a secure, full-stack AI-powered coding platform enabling intelligent code generation and isolated developer workspaces. - Implemented sandboxed code execution using Docker with an integrated Monaco editor. - Optimized repository understanding via a scalable RAG pipeline using Celery and Qdrant.	
Explainable AI Project (XAI) (<i>Python, TensorFlow, Scikit-learn, Streamlit, SHAP/LIME</i>)	Github
- Developed ML/DL models (CNN-LSTM, SVM, DNN) for IoT security, NLP, and smart grid monitoring. - Integrated SHAP and LIME algorithms into interactive Streamlit dashboards, delivering real-time transparency and feature-level explanations for black-box predictions.	
DrawSync (<i>Next.js, TypeScript, WebSockets, PostgreSQL, AI</i>)	Github
- Engineered a multi-user whiteboard supporting simultaneous drawing across WebSocket rooms. - Built 4+ distinct drawing tools (rectangle, circle, line, freehand) with real-time synchronization. - Integrated Gemini AI shape suggestions, improving drawing accuracy by 30%.	
Generative AI Projects (<i>LangChain, LangGraph, RAG, Fine-tuning</i>)	Github
- Built a voice-enabled coding assistant to execute and explain code via speech. - Deployed a RAG system to query 1,000+ pages of PDF content, cutting information retrieval time by 70%. - Fine-tuned a domain-specific LLM, boosting task accuracy by 25% over the baseline.	

SKILLS

- Languages: JavaScript, C, C++, Python, Java, TypeScript
- Web & Frameworks: HTML, React, Next.js, Express.js, REST APIs, WebSockets, AuthJS
- Databases: PostgreSQL, MongoDB Atlas, Neo4j, Qdrant
- AI/ML & Tools: LangChain, LangGraph, RAG, LLM Fine-Tuning, Multi-Agent Orchestration, TensorFlow, Scikit-learn
- Cloud & DevOps: AWS, Docker, Kubernetes (K8s), CI/CD, Git, GitHub, Vercel, Render

EXPERIENCE

Buildspace	June 2024 – July 2024
<i>Fellowship – Remote</i>	San Francisco, USA
- Full-Stack Development: Built and deployed features using the MERN stack (MongoDB Atlas, Express.js, React.js, Node.js) with smooth frontend–backend integration. - UI/UX Enhancements: Elevated user experience by implementing Material UI components and GSAP animations, creating a modern and intuitive interface.	

ACHIEVEMENTS

- Solved 450+ coding problems on LeetCode (DP, graphs, sliding window, binary search etc.)
- Buildspace Season 5 Fellow.
- Actively participate in football and badminton, fostering teamwork, discipline, and strategic thinking.
